K & N OEM Replacement Filter Chargers Air Filters

\$79.99/pair

These reusable K&N Filter chargers are a direct replacement for factory filters. They outflow any other filter—up to 900 cfm—for power gains up to 15 horsepower. The K&N air filter uses a surgical cotton fabric soaked in oil as its tack barrier. Sandwiched between aluminum screen wire, the square holes in the cotton catch tumbling air and straighten it out. Since air moving in a straight line flows faster, the filter can actually improve airflow. The Dodge Viper requires two filters.

The K&N filter can be covered by 1/4 in. of debris before air restriction makes cleaning necessary. Then you wet it down or roll it in cleaning solution, hose it off, let dry, apply the air filter oil, and reuse it. Filters come pre-oiled.
